EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 31 March 1923.

Table VI. shows, for the 157 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31 March 1923.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 31 March 1923. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, while that for the quarter ending 31st December contains also a summary of certain figures for the year.

To be obtained from H.M. Stationery Office at the following addresses : Imperial House, Kingsway, London, W.C.2, and 28 Abingdon Street, London, S.W.1 ; 37 Peter Street, Manchester ; 1 St. Andrew's Crescent, Cardiff ; or 120 George Street, Edinburgh.

NOTES ON THE FIRST QUARTER OF 1923.

ENGLAND AND WALES.

Births.

The Births registered in the *First Quarter* of 1923 numbered 192,970 and were 16,602 more than in the preceding Quarter, and 14,603 fewer than in the corresponding Quarter of 1922. The Illegitimate Births totalled 7,867 or 1,386 fewer than in the first Quarter of 1922.

Of these 192,970 Births 98,761 were males and 94,209 females, giving a proportion of 1,048 males to 1,000 females; the average proportion in the 10 preceding first Quarters was 1,045.

The Births registered in the Quarter correspond to an annual rate of 20·5 per 1,000 of the estimated population in the middle of the year 1922. This is the lowest birth-rate recorded in any first quarter except during the period of the war.

Deaths.

The Deaths registered numbered 124,720 and were 14,655 more than in the preceding Quarter, but 40,747 fewer than in the corresponding Quarter of 1922. They included 63,401 males and 61,319 females, corresponding to an annual rate of 13·3 per 1,000 estimated population and a proportion of 1,034 males to 1,000 females. This is the lowest death-rate recorded in any first quarter.

Influenza was stated to be either a primary or contributory cause of deaths in 2,260 cases, or 1·8 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 83 per 1,000, this being 31 per 1,000 below the average of the 10 preceding first Quarters, and the lowest rate recorded in any first quarter.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows :—

From *enteric fever* 0·08 in Burnley; from *measles* 2·23 in Tynemouth, 2·36 in Dudley, 2·95 in Darlington and 3·04 in Stockton on Tees; from *scarlet fever* 0·20 in Norwich, 0·21 in Oxford and 0·32 in West Bromwich; from *whooping cough* 0·74 in Tynemouth, 0·76 in Walsall and 1·41 in South Shields; from *diphtheria* 0·39 in Norwich, 0·47 in Cambridge and 1·05 in West Bromwich; and from *influenza* 0·55 in Swansea, 0·60 in Northampton and 0·69 in Barnsley.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 15·4 in Wimbledon, 15·8 in Bolton, 15·9 in Salford, 18·5 in Wakefield and 28·4 in Tynemouth.

Small Pox.

No fatal case of small pox was registered during the quarter.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 68,250, as against 133,349, 80,306 and 42,106 in the first Quarters of 1920, 1921 and 1922.

NOTES ON MARRIAGES.—Fourth Quarter, 1922.

The number of *persons* married in the *fourth* Quarter of 1922 in England and Wales was 152,760, a decrease of 26,640 from the number in the preceding Quarter, and of 15,018 from that in the corresponding Quarter of 1921. The number corresponds to an annual rate of 15·9 per 1,000 enumerated population.

UNITED KINGDOM.—Third Quarter, 1922.

In Great Britain and Ireland 245,566 births and 116,925 deaths were registered in the three months ended 30th September 1922. The natural increase in population was therefore 128,641. The number of persons married was 209,604.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.*

JANUARY, 1923.

The month of January was mild. Owing to the influence of depressions from the Atlantic the weather during the first few days was unsettled, with somewhat heavy rain at times but considerable bright intervals. Subsequently the weather was bright and comparatively dry. The normal temperature for the month was exceeded by several degrees, but there were some cold days, such as the 17th, on which day the maximum temperature at Kew Observatory, Richmond, was only 29 F.

Precipitation was deficient, the average for the country on the whole being only about four-fifths of the normal. In certain districts however the normal was exceeded, notably in the Lake Districts and in central Wales. There was an unusual absence of snow. The duration of sunshine was appreciably above normal in eastern and south-eastern England and in the midland counties. Over western England and Wales sunshine was somewhat deficient.

FEBRUARY, 1923.

February was characterised by mild and very wet weather. During the first four days temperature was remarkably high for the time of year. Subsequently the dominating influence was that of continued low pressure to the westward of the British Isles, and high winds and heavy rainfall were frequent. The mean temperature was above the normal generally, but a few low temperatures were recorded by thermometers exposed over grass, the lowest being 15°F. at Rhayader on the 5th.

Over a large area of England and Wales precipitation was more than twice the normal, while over a region extending from north Cornwall to Staffordshire precipitation exceeded three times the normal. In many places the amounts registered constituted records for the month, thus at Ross-on-Wye the rainfall was the highest experienced in February during the 105 years of observation. General snowfalls occurred after the middle of the month in northern and central England.

* Furnished by the Director of the Meteorological Office.

The duration of sunshine was appreciably below the normal. Fog was not very prevalent.

MARCH, 1923.

The weather of the first week of March was mild and unsettled, with south-westerly winds. Two weeks of easterly winds and rather low temperature followed. The last week of the month was warm with southerly breezes. The mean temperature was again above normal generally. Unusually high day temperatures occurred about the 27th. At Kew Observatory, Richmond, a maximum of 68 F. was registered on that date, this being, with one exception, the highest March temperature during the past 50 years.

Precipitation was somewhat below normal for England and Wales as a whole, but over a considerable area of the south of England the normal was exceeded, notably in the Thames Valley and in London. Very little snow fell, but local thunderstorms occurred. The duration of sunshine was appreciably below normal, and fog was rather prevalent.

* Excluding non-civilians.

† The populations are total populations and relate to 1923. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

* For statistics of other Colonial and Foreign Cities during the Fourth Quarter of 1922, see Quarterly Return for that year.
† The death-rates in this column relate to all ages for Bombay, Madras, Christiania, and Budapest, and to children 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.
‡ Including 15 deaths from Plague in Calcutta and 1 in Madras, and from Asiatic Cholera 228 in Calcutta, and 5 in M.
§ Including deaths from croup in Bombay, Paris, Amsterdam, Copenhagen, the German Cities, Vienna, Prague, Bud
Warsaw, Rio de Janeiro, Montevideo and New Orleans.
¶ The estimated population and deaths refer to the civilian population only.
¶ The registration of births in Bombay is incomplete.

Price 2s. 6d. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 30 June 1923.

Table VI. shows, for the 157 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30 June 1923.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 30 June 1923. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note.—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, while that for the quarter ending 31st December contains also a summary of certain figures for the year.

NOTES ON THE SECOND QUARTER OF 1923.

ENGLAND AND WALES.

Births.

The Births registered in the *Second* Quarter of 1923 numbered 196,831 and were 3,861 more than in the preceding Quarter, but 3,719 fewer than in the corresponding Quarter of 1922. The Illegitimate Births totalled 8,019, or 713 fewer than in the second Quarter of 1922.

Of these 196,831 Births 100,283 were males and 96,548 females, giving a proportion of 1,039 males to 1,000 females; the average proportion in the 10 preceding second Quarters was 1,045.

The Births registered in the Quarter correspond to an annual rate of 20·7 per 1,000 of the estimated population in the middle of the year 1922. This is the lowest birth-rate recorded in any second Quarter except during the period of the war.

Deaths.

The Deaths registered numbered 114,040 and were 10,680 fewer than in the preceding Quarter, and 6,275 fewer than in the corresponding Quarter of 1922. They included 58,242 males and 55,798 females, corresponding to an annual rate of 12·0 per 1,000 estimated population and a proportion of 1,044 males to 1,000 females.

Influenza was stated to be either a primary or contributory cause of deaths in 3,791 cases, or 3·3 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 66 per 1,000, this being 18 per 1,000 below the average of the 10 preceding second Quarters, and the lowest rate recorded in any second Quarter.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·07 in Portsmouth and Doncaster and 0·8 in Worcester; from *measles* 1·31 in Middlesbrough, 1·93 in South Shields, 2·02 in Gateshead and 2·09 in Merthyr Tydfil; from *scarlet fever* 0·15 in Burnley, 0·18 in Middlesbrough, 0·21 in Aberdare and 0·22 in Dewsbury; from *whooping cough* 0·61 in Manchester, 0·64 in Sunderland and 0·81 in Tynemouth; from *diphtheria* 0·33 in Gillingham, 0·36 in Norwich and 0·79 in West Bromwich; and from *influenza* 1·64 in Sheffield, 1·65 in Chesterfield, 1·90 in Doncaster, 1·92 in Oldham and 2·10 in Bury.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 15·5 in Salford, 18·1 in West Bromwich, 19·0 in Sunderland and 23·9 in Wakefield.

Small Pox.

A supplementary table (VIII. a) showing the distribution of the cases of small pox notified during the Quarter is given on p. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 82,791, as against 129,345, 116,832 and 80,235 in the second Quarters of 1920, 1921 and 1922.

NOTES ON MARRIAGES.—First Quarter, 1923.

The number of *persons* married in the *first* Quarter of 1923 in England and Wales was 106,562, a decrease of 46,198 from the number in the preceding Quarter, and an increase of 5,414 over that in the corresponding Quarter of 1922. The number corresponds to an annual rate of 11·3 per 1,000 estimated population.

UNITED KINGDOM.—Fourth Quarter, 1922.

In Great Britain and Ireland 223,058 births and 139,729 deaths were registered in the three months ended 31st December 1922. The natural increase in population was therefore 83,329. The number of persons married was 180,230.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.*

APRIL, 1923.

On the whole April was a cold and rather wet month. The warmest weather of the month occurred during the first fortnight, in particular on the 4th and 12th, when the temperature rose to 60°F. or slightly higher in the midland and southern counties. A cool "easterly" type of weather prevailed from the middle of the month until about the 25th, when there was a change to a warm "south-westerly" type. Gales occurred on the 25th in parts of the English Channel and in the north. During the cold period, day readings of the thermometer seldom exceeded 55°F., while at night the temperature on the grass repeatedly fell below the freezing point. Rainfall was above the average except in East Anglia, part of Cumberland, and along the east coast. Thunder was heard on several occasions, but was most general on the 11th and 12th. The duration of sunshine was appreciably below the average.

MAY, 1923.

With the exception of a few unusually warm days soon after the beginning of the month, the month of May was cold and dull, almost wintry. In southern and eastern England temperature rose locally to slightly above 80°F. between the 3rd and 5th. Subsequently, the daily maxima remained low, seldom exceeding 60°F°. On the 24th considerable damage was done by frost to crops in the midlands and eastern counties. The distribution of rainfall was irregular. North of a line joining the Bristol Channel and the Wash there was an excess of rainfall, in most places, of considerable degree. Other wet areas were the London neighbourhood and Lower Thames Valley, Surrey, Kent, Sussex and Cornwall. In other parts of the country rainfall was below the average. The total duration of sunshine for the month was below average, the week May 6th to 12th being the sunniest. Thunderstorms were fairly general in London and south-east England on the 12th and 16th.

JUNE, 1923.

Cool and dull weather characterized the greater part of June. Temperature was below average, and ground frosts were reported from several stations during the month. At Cambridge on the 3rd the reading of a minimum thermometer exposed over grass was 26°F. The month was remarkable for its dryness. At Kew, only twice during the last 50 years, in 1895 and 1921, has the June total rainfall been so low, viz. 6 mms. At Southport the month was the driest on record. At Torquay only once since 1892 has there been a drier June, viz. during the extremely dry summer of 1921. The weather during the last week was mainly fine, cool and dry. The total duration of sunshine for the month was below average.

* Furnished by the Director of the Meteorological Office.

* Excluding non-civilians.

† The populations are total populations and relate to 1923. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

* For statistics of other Colonial and Foreign Cities during the First Quarter of 1923, see Quarterly Return for that period.

† The death-rates in this column relate to all ages for Bombay, Madras, Christiania, and Budapest, and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 463 deaths from Plague and 5 from Cholera.

§ Including deaths from group in Bombay, Paris, Amsterdam, Copenhagen, the German Cities, Vienna, Prague, Budapest, Warsaw, Rio de Janeiro, Montevideo and New Orleans.

|| The estimated population and deaths refer to the civilian population only.

¶ The registration of births in Bombay is incomplete.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 29th September 1923.

Table VI. shows, for the 157 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30th September 1923.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 29th September 1923. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note:—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates while that for the quarter ending 31st December contains also a summary of certain figures for the year.

NOTES ON THE THIRD QUARTER OF 1923.

ENGLAND AND WALES.

Births.

The Births registered in the *Third* Quarter of 1923 numbered 190,148 and were 6,683 fewer than in the preceding Quarter, and 5,548 fewer than in the corresponding Quarter of 1922. The Illegitimate Births totalled 7,812, or 650 fewer than in the third Quarter of 1922.

Of these 190,148 Births 97,350 were males and 92,798 females, giving a proportion of 1,049 males to 1,000 females; the average proportion in the 10 preceding third Quarters was 1,046.

The Births registered in the Quarter correspond to an annual rate of 19·8 per 1,000 of the estimated population in the middle of the year 1922. This is the lowest birth-rate recorded in any third Quarter except during the period of the war.

Deaths.

The Deaths registered numbered 91,325 and were 22,715 fewer than in the preceding Quarter, but 343 more than in the corresponding Quarter of 1922. They included 47,274 males and 44,051 females, corresponding to an annual rate of 9·5 per 1,000 estimated population and a proportion of 1,073 males to 1,000 females.

Influenza was stated to be either a primary or contributory cause of deaths in 742 cases, or 0·8 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 57 per 1,000, this being 27 per 1,000 below the average of the 10 preceding third Quarters, and with the exception of a mortality of 55 in the third Quarter of last year was the lowest rate recorded in any Quarter.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows :—

From *enteric fever* 0·07 in Huddersfield and in Dewsbury 0·08 in Gloucester, and 0·11 in West Hartlepool; from *measles* 0·52 in Liverpool, 0·55 in Dudley, 0·75 in South Shields, and 0·92 in Aberdare; from *scarlet fever* 0·11 in Barrow-in-Furness, 0·12 in Middlesbrough, and 0·13 in Enfield; from *whooping cough* 0·34 in Burnley and in Sunderland, 0·36 in Doncaster, 0·51 in Warrington, and 0·60 in Oldham; from *diphtheria* 0·17 in Portsmouth, 0·19 in Chester, 0·22 in Carlisle, and 0·51 in Smethwick; and from *influenza* 0·28 in Bury, 0·32 in West Bromwich, 0·36 in Dewsbury and 0·52 in Barnsley.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 29·9 in West Bromwich, 33·3 in Sunderland, 37·8 in Hull, and 54·9 in Walsall. Special tables relating to summer mortality from *diarrhœa* and *enteritis* are inserted in the present Return (Tables IX. and X).

Small Pox.

A supplementary table (VIII. *a*) showing the distribution of the cases of small pox notified during the Quarter is given on p. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 98,823, as against 136,113, 115,710 and 104,714 in the third Quarters of 1920, 1921 and 1922.

NOTES ON MARRIAGES.—Second Quarter, 1923.

The number of *persons* married in the *second* Quarter of 1923 in England and Wales was 149,616, or 43,054 in excess of the number in the preceding Quarter, but 15,796 below the number in the corresponding Quarter of 1922. The number corresponds to an annual rate of 15·7 per 1,000 estimated population.

UNITED KINGDOM.—First Quarter, 1923.

In Great Britain and Ireland 244,046 births and 159,313 deaths were registered in the three months ended 31st March 1923. The natural increase in population was therefore 84,733. The number of persons married was 134,546.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGICAL REMARKS

FOR ENGLAND AND WALES FOR QUARTER ENDED
SEPTEMBER 30TH, 1923.

JULY.

The first few days of July were characterised by westerly winds with mainly overcast skies and a temperature slightly below normal. The weather subsequently became fine and sunny with high day temperatures and warm nights. After the middle of the month the weather was cooler and more cloudy with heavy rain at times and strong westerly winds occasionally on exposed parts of the coast. The mean temperature of the month was about 3°F. above normal. A maximum of 96°F. was registered at Camden Square, London, on the 13th. The rainfall was variable, some districts having an excess and others a deficit. East and south-east England had sunshine considerably in excess of normal while the remainder of the country had a considerable deficiency.

AUGUST.

The first day of August was fine and sunny, but the second and third were unsettled. Subsequently, fine warm weather prevailed in the south-east for nearly a fortnight. In the north and west the weather continued unsettled. Temperatures rose well above the

average in the south-east and exceeded 80°F. on several occasions, but did not reach the high values of July. On the 15th the maximum readings of the south fell 10°F. owing to cool northerly winds. During the latter half of the month unsettled conditions prevailed generally. Gales or high winds occurred frequently on the coasts, notably on the 29th-30th. The mean temperature was about normal and rainfall also normal, except in north-west England where a considerable excess fell. Sunshine was above normal almost everywhere, especially in east and south-east England.

SEPTEMBER.

During the early part of September warm and sunny weather prevailed generally in the more southerly parts of the country, maximum temperatures being comparatively high. In the north the weather was less fine. Towards the end of the second week unsettled conditions prevailed generally and strong winds were experienced on the western coasts till the 26th. Northerly winds caused a decided fall of temperature on the 15th, and from this date the weather was cool until the closing days of the month, when quiet and warm weather was re-established with unusually high night temperatures. The mean temperature was about 1°F. below normal. Rainfall was mainly in excess and sunshine was above normal everywhere.

* Excluding non-civilians.

† The populations are total populations and relate to 1923. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

† Deaths from small-pox are included as follows:—Greater London, 2; Outer Ring, 1; 16 Great Towns in Outer Ring, 1.

TABLE VI.—157 SMALLER TOWNS } POPULATION, BIRTHS and DEATHS for

* For statistics of other Colonial and Foreign Cities during the Second Quarter of 1923, see Quarterly Return for that period.

† The death-rates in this column relate to all ages for Bombay, Madras and Christiania, and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 386 deaths from Asiatic Cholera in Calcutta, 25 in Bombay and 1 in Madras, and from Plague 69 in Calcutta and 714 in Bombay and 13 in Alexandria.

§ Including deaths from croup in Bombay, Paris, Amsterdam, Copenhagen, the German Cities, Prague, Warsaw, Rio de Janeiro, Montevideo and New Orleans.

|| The estimated population and deaths refer to the civilian population only.

¶ The registration of births in Bombay is incomplete.

Price 2s. 6d. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 29th December 1923.

Table VI. shows, for the 157 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31st December 1923.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 29th December 1923. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note.—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates while that for the quarter ending 31st December contains also a summary of certain figures for the year. (See page iv.)

NOTES ON THE FOURTH QUARTER OF 1923.

ENGLAND AND WALES.

Births.

The Births registered in the *Fourth* Quarter of 1923 numbered 178,437 and were 11,711 fewer than in the preceding Quarter, but 2,094 more than in the corresponding Quarter of 1922. The Illegitimate Births totalled 7,261, or 139 more than in the fourth Quarter of 1922.

Of these 178,437 Births 91,190 were males and 87,247 females, giving a proportion of 1,045 males to 1,000 females; the average proportion in the 10 preceding fourth Quarters was 1,050.

The Births registered in the Quarter correspond to an annual rate of 18·4 per 1,000 of the estimated mid-year population. This rate is 0·1 per 1,000 above that recorded in the corresponding quarter of 1922, which was the lowest birth-rate recorded in any quarter except during the period of the war.

Deaths.

The Deaths registered numbered 114,784 and were 23,459 more than in the preceding Quarter, and 4,726 more than in the corresponding Quarter of 1922. They included 58,018 males and 56,766 females, corresponding to an annual rate of 11·9 per 1,000 of the estimated population and a proportion of 1,022 males to 1,000 females.

Influenza was stated to be either a primary or contributory cause of deaths in 1,578 cases, or 1·4 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 70 per 1,000, this being 25 per 1,000 below the average of the 10 preceding Fourth Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows :—

From *enteric fever* 0·14 in Huddersfield and 0·15 in Dewsbury; from *measles* 0·41 in Edmonton, 0·60 in Bootle, 0·76 in Chesterfield and 0·77 in Gloucester; from *scarlet fever* 0·13 in Rochdale, 0·14 in Dudley, 0·18 in Middlesbrough and 0·23 in Gloucester; from *whooping cough* 0·27 in Burnley, 0·30 in Oldham and in Stockton-on-Tees and 0·33 in Grimsby; from *diphtheria* 0·20 in Exeter, 0·22 in Carlisle, 0·26 in Bristol and 0·29 Merthyr Tydfil; from *influenza* 0·47 in Wood Green, 0·52 in Barnsley, 0·54 in Wallasey and 0·58 in Dewsbury.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 20·7 in Wolverhampton, 21·5 in Bolton, 28·4 in Barnsley and 34·4 in Stoke-on-Trent.

Small Pox.

Two fatal cases of small pox were registered during the quarter; one belonged to Chester C.B. and one to Gloucester C.B.

A supplementary table (VIII. a) showing the distribution of the cases of small pox notified during the Quarter is given on p. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 63,653, as against 92,845, 77,337 and 66,285 in the fourth Quarters of 1920, 1921 and 1922.

NOTES ON MARRIAGES.—Third Quarter, 1923.

The number of *persons* married in the *third* Quarter of 1923 in England and Wales was 174,550, an increase of 24,934 over the number in the preceding Quarter, but 4,910 less than that in the corresponding Quarter of 1922. The number corresponds to an annual rate of 18·0 per 1,000 of the estimated mid-year population.

UNITED KINGDOM.—Second Quarter, 1923.

In Great Britain and Ireland 250,295 births and 146,978 deaths were registered in the three months ended 30th June 1923. The natural increase in population was therefore 103,317. The number of persons married was 179,822.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

SUMMARY, 1923.

The Summary relating to the year 1923, giving the principal Tables published up to 1912 in the "Annual Summary," will be found on pages 24-39 of this publication, the Tables being numbered IX-XV.

ENGLAND AND WALES.

According to the quarterly returns furnished by local registrars, 758,386 births and 444,869 deaths were registered in England and Wales in the year 1923. The natural increase of population, by excess of births over deaths, was, therefore, 313,517, the average annual increase in the preceding five years having been 282,843. This statement excludes all war deaths except those registered in this country. The number of persons married during the year was 584,140.

The marriage-rate in England and Wales during the year 1923 was 15·2 per 1,000 of the estimated population at the middle of the year, the birth-rate 19·7 per 1,000, and the death-rate 11·6 per 1,000. Infant mortality was 69 per 1,000 registered births. The birth-rate was the lowest recorded except during the war years 1917-19 and the death-rate and infant mortality were lower than in any other year, the lowest rates hitherto recorded being 12·1 in 1921 and 77 in 1922 respectively.

A statement of the birth-rate and an analysis of the mortality during the year in England and Wales, London, and the groups of towns is given in Table X; and Table XI shows the birth-rate, death-rate (from all causes and from various causes), and infant mortality during the year in each of the Metropolitan Boroughs and 105 Great Towns.

METEOROLOGY.***OCTOBER.**

The month was characterised mainly by unsettled boisterous weather with south-westerly winds, often of gale force, frequent squalls and heavy rainfall. There were, however, considerable bright periods. The stormy periods were the 3rd, 9th to 13th and 18th to 30th. Quiet weather was experienced at the middle of the month, with ground frosts at many inland places. The mean temperature was slightly above the normal everywhere except in the north-east, and with the same exception rainfall was everywhere above normal. There was a moderate deficiency of sunshine, except in north-east England, which had an excess.

NOVEMBER.

The mild and unsettled weather of October continued for the first few days of the month, and maximum temperatures over 60°F. were registered. Apart from this period and a short one near the middle of the month, cold weather prevailed with much frost at night but many sunny days. About the 25th the weather was intensely cold and foggy. Gales occurred in exposed places on the 3rd, and again from the 12th to 18th, accompanied by heavy rain, which gave rise to extensive floods in Lancashire, North Wales, Cheshire and elsewhere. The mean temperature was 4°F. to 6°F. below normal, and sunshine was everywhere in excess. In the midland counties and southern England and Wales precipitation was deficient. Snowfalls occurred in all parts of the country.

DECEMBER.

At the beginning of the month the weather was somewhat less severe than in November, but snow was still lying in many places, and mist and fog prevailed generally. Warmer weather was subsequently experienced, but between the 19th and the 22nd cold northerly winds and falls of snow were general. During the rest of the month mild periods alternated with cold ones, the latter predominating in the eastern part of the country. From the 19th to 28th snow or sleet fell daily in some region or other. High southerly winds were experienced on the coasts about the 2nd and 7th, and the subsequent westerly and northerly winds were frequently rough. The mean temperature was below normal by amounts up to 2°F. Precipitation was about normal, except in south-west England, which had a moderate deficiency. There was a moderate excess of sunshine almost everywhere.

* Furnished by the Director of the Meteorological Office.

* Excluding non-civilians.

† The populations are total populations and relate to 1923. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

TABLE VI.—157 SMALLER TOWNS }
 (Adjusted populations 20,000— } POPULATION, BIRTHS and DEATHS for

TABLE X.—**Birth-rate, Death-rate, and Analysis of Mortality** during the year 1923.

(Provisional figures. The rates for England and Wales have been calculated on a population estimated to the middle of 1923, while those for the towns have been calculated on populations estimated to the middle of 1922. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards London and the groups of towns.)

	BIRTH-RATE PER 1,000 TOTAL POPULA- TION.	ANNUAL DEATH-RATE PER 1,000 POPULATION.								RATE PER 1,000 BIRTHS.		PERCENTAGE OF TOTAL DEATHS.			
		All Causes.	Enteric Fever.	Small-pox.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.	Influenza.	Violence.	Diarrhoea and Enteritis (under Two years).	Total Deaths under One year.	Death certi- fied by Medical Practitioners.	Inquest Cases.	Uncertified Causes of Death.

BELFAST†																					

* Excluding non-civilians.

† The populations are total populations and relate to 1923. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar year.

† Deaths from Small-pox are included as follows :—Greater London, 2; Outer Ring, 1; 16 Great Towns, 1.

* The hours of observation are 9 a.m. and 9 p.m. local time.

† The normals used are obtained from observations extending over 35 years (1881-1915).

Pressure is expressed in millibars (1000 mb. = 29.531 mercury-inches). Wind Force.—The Summary is obtained from the records of a cup anemograph having 5 in. cups and 15 in. arms. The factor used is 8. Winds above 43 miles per hour are reckoned as gales and winds between 21 and 43 miles per hour as moderate or strong winds. Direction not tabulated when the

† A day is reckoned as "generally clear" if the average of the estimates of the fraction of sky covered by cloud at 9 a.m., 3 p.m., and 9 p.m. is less than .2, and as "generally overcast" if the average is greater than .8. Days persistently cloudless and days persistently overcast refer to the period midnight to midnight.

Table XV.—BIRTHS and DEATHS in LONDON and in certain CITIES in the BRITISH EMPIRE and FOREIGN COUNTRIES, 1923 (52 weeks).

Note.—The figures in this table are compiled from the weekly returns.

* These populations relate, as far as possible, to the middle of the year. They differ in some cases from those in Table VII.

† The figures for London refer to the civilian population only.

‡ Including deaths from croup in Paris, Amsterdam, Copenhagen, the German cities, and Warsaw.

§ Including 77 deaths from plague in Calcutta, and 1 in Madras, and from Asiatic Cholera 906 deaths in Calcutta, and 22 in Madras.

** The deaths in this column relate to all ages for Madras, and Christiania, and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, and the German cities.
